

Two in One.

Our Hybrid cables provide both electricity and data signals.

*"Saves time, space
and money."*

Our Hybrid cables provide both electricity and data signals.

By including both power and data in only one multifunctional cable, you can save a lot of installation time. Plus, the mini-cable design requires less space and can be laid exactly where you need to maximise coverage in FTTP applications. To double up is the flavour of the future.

HYBRID FIBRE-ENERGY CABLE

Application

Our Hybrid fibre-energy cable combines optical fibre (multimode or single mode) and aluminum conductors for power in a single lightweight cable. It is a perfect solution suitable for every FTTP (Fibre To The Premises) application. The mini-design fits excellently especially in urban electricity networks as it can be placed exactly where it is needed to maximize coverage.

The specially formulated compounds provide a full range of performance characteristics, such as long-term reliable service in the harshest environments and superior durability in heavy use applications.

This hybrid cable can be customized to suit your exact requirements including various fibre optic cable designs, power limited data, signal and communications conductors.

MAIN FEATURES

- ✓ Two in one – reducing time and space for installation
- ✓ Mini-design for easy handling
- ✓ Heat and moisture resistant
- ✓ Suitable for continuous use at 70 °C (LV) and 90 °C (MV), wet or dry
